## **Dream SRS Summary**

### **Summary**

**“Content isn’t king. It’s the kingdom.”**

With the help of this project, the users will be able to stream and enjoy their favourite movies and TV Shows from the comfort of their homes. Dream platform will be a one-stop solution for all the content and entertainment needs of the user. Special highlights of the platform will be mood-based themes and movie recommendations, watch party, kids friendly mode and all the basic features that a conventional OTT platform offers.

### **System Features**

#### **1. Watch Party**

By this feature, users will be able to stream their favourite movie with their friends side-by-side. Like it’s same feeling as watching the movie in a movie theatre with your pals. This feature just requires to generate a link where your friends can join in. This feature requires all the users to have an account on Dream Platform.

#### **2. Movie Recommendations**

Based on the preferences and watch history of the user, platform will suggest him/her content to stream. For example, if the preference is action movies, then the recommendation feature will suggest more action genre to the user.

#### **3. Parental Controls**

Now parents will be able to control what content their kids consume on the platform from one single click. Users need to turn on kids mode in settings section to enable the age restriction on the platform.

#### **4. Mood-based UI**

This feature will let you change the UI interface of the platform based on your viewing preferences. For example, senior users can change the theme to Retro for more personalized and nostalgic feeling while streaming on our platform.

### **Tech Stack to be used**

**Frontend:** HTML, CSS, JavaScript

**Framework:** ReactJS

**Backend:** MongoDB, Express, NodeJS
