<b>Sr. No</b>	<b>Title of the Experiment</b>
<b>1</b>	Implement an Intelligent agent.
<b>2</b>	Implement a given problem using the searching technique.
<b>3</b>	Implement a given problem using knowledge representation and reasoning rules
<b>4</b>	To design and implement an intelligent system, incorporating the matching algorithm and the rule language. 1. It should provide a fact base updating function. 2. It should provide a function that checks the rules' LHS and return which rules were matched. 3. It should support firing RHS according to matches. Using SWISH Prolog or Java or Python or any other open-source tool
<b>5</b>	Implement supervised learning algorithms.
<b>6</b>	Implement unsupervised learning algorithms.
<b>7</b>	Implement the regression model
<b>8</b>	Minor project covering the concepts of AIML on the real life problem statements.
