

ITL Lab Assignment

TEAM:	I. Shreyash Dhamane 2020300006 II. Aakanksha Dhawale 2020300008 III. Shubham Golwal 2020300015
GRADE:	T.E. COMPS - A
Experiment No.	2

Assignment 2	
AIM:	Design wireframes for Interview Experiences website.
THEORY:	<p>A wireframe is the first step in the UX design workflow of a website or mobile application. The concept of creating a wireframe is similar to how architects start with blueprint drawings and engineers sketch mechanical diagrams.</p> <p>A wireframe's overall layout is like a bird's eye view of all the pages in a website or app. The pages are laid out in a grid side-by-side in columns and rows with enough space between them to add interaction instructions.</p> <p>There are three main types of wireframes. These are the building blocks of the wireframing process.</p> <ul style="list-style-type: none"> ● Low-fidelity wireframes ● Mid-fidelity wireframes ● High-fidelity wireframes <p>LOW FIDELITY WIREFRAMES: The first and simplest type is the low-fidelity wireframe. These are created either by hand, or with a digital tool. Low-fidelity wireframes are meant to be created fast and loose, without any design elements at all. Think of it as the skeleton of a website or app. The choice to create these by hand or with a tool depends solely on the work style of each person. There are printable templates for sketching wireframes on paper, and there are plenty of low-fidelity templates and kits to create these online. The main idea in a low-fidelity wireframe is to be as minimal as possible. Use only grayscale, one generic font, and no images or design effects like shadows.</p> <p>MID FIDELITY WIREFRAMES: A mid-fidelity wireframe is more elaborate than a low-fidelity wireframe and closer to the intended final UI design. The wireframe might show images, more detailed visualizations of what's intended for the layout, and interactions between pages are clearer and more elaborate than in a low-fi wireframe. A mid-fidelity wireframe can either be a continuation and improvement of a low-fidelity wireframe or the first step. For example, if this is the second or third wireframe for the same brand, it might not be necessary to start at low-fidelity.</p>

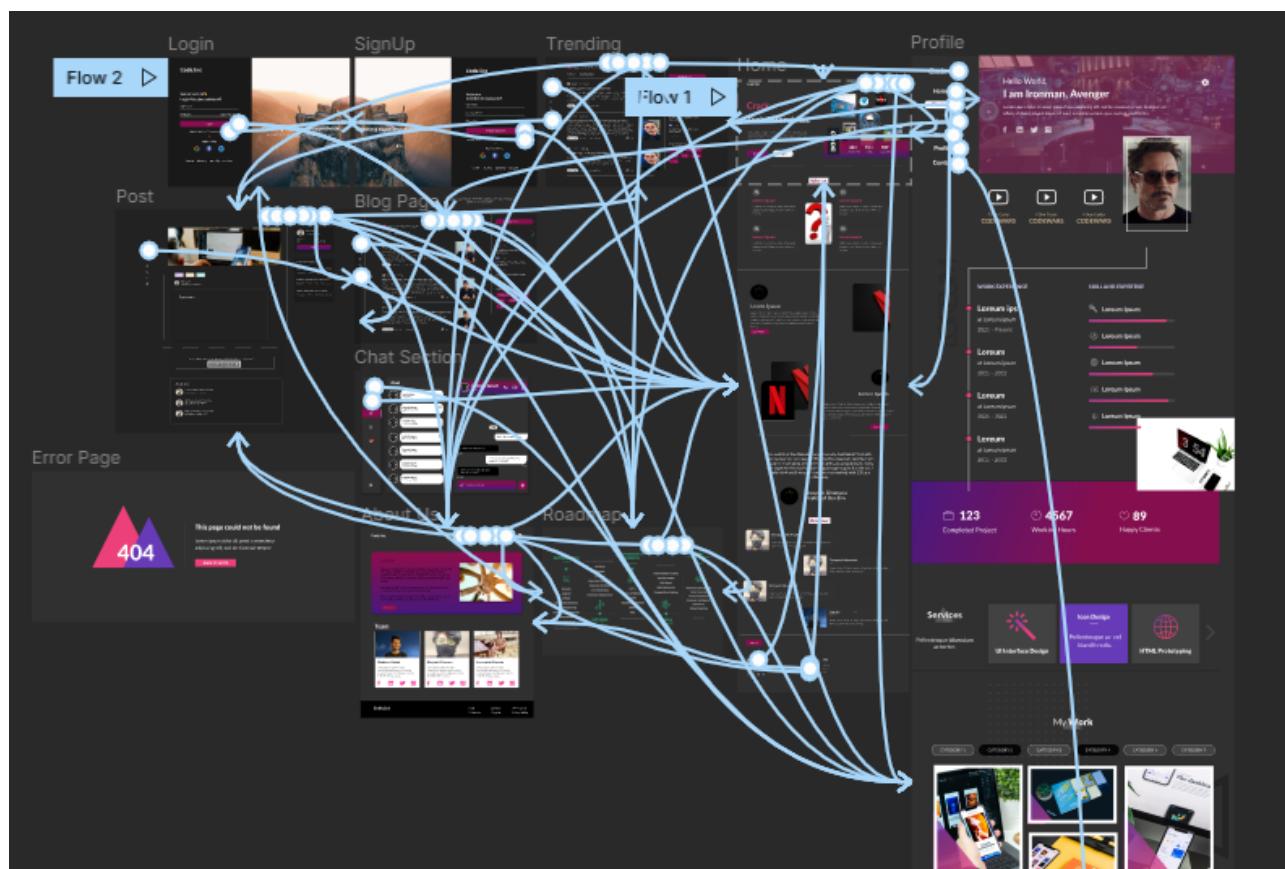

HIGH-FIDELITY WIREFRAMES: The third type of wireframe is high-fidelity. This is the wireframe type closest to how the UI design is going to look in the finished project. The UI components, images, icons, colors, fonts, buttons, and backgrounds are in place and ready to be turned into a working prototype. A high-fidelity wireframe is not always the best place to start with a UX/UI project. If you don't have a good base with a low-fidelity wireframe that has been tested for usability and with a few iterations, you'll have to do these things in a high-fidelity wireframe. This takes up too much time.

Problem Statement: **Created an Interview Experiences website useful to students at the time of preparation of all types of job interviews.**

I've written a few thousand words on why traditional "semantic class names" are the reason CSS is hard to maintain, but the truth is you're never going to believe me until you actually try it. If you can suppress the urge to retch long enough to give it a chance, I really think you'll wonder how you ever worked with CSS any other way.

Aakanksha:

Post:

The screenshot shows a dark-themed user interface for a platform. At the top, there's a navigation bar with links: Home, Profile, Trending, Roadmap, Blog, and About. Below the navigation is a profile section for a user named Shreyash, described as a 'WEB DEVELOPER'. It shows 1.5k followers and a join date of May 12, 2020. A 'Follow' button is present. To the right, there are three short posts from Shreyash with titles like 'What's new in Angular version 12?', 'Nullam magna tincidunt nunc ante.', and 'Morbi sit voluptatibus odio et.'. Below the profile is a large text input field with placeholder text 'Type here...'. Underneath the input field is a toolbar with various text formatting options. At the bottom left, there's a 'Read next' section with three more posts.

Trending:

The screenshot shows a dark-themed user interface for a platform. At the top, there's a navigation bar with links: Home, Profile, Create Post, Roadmap, and About. A prominent red '+' button is on the left, with the text 'Keep up with the latest in any topic'. Below the navigation is a sidebar with icons for Home, Profile, Create Post, Roadmap, and About. The main content area displays three trending posts. The first post is by a user named Lorem, titled 'A flaring point in DE Shaw Interview.', with a thumbnail of a man wearing sunglasses. The second post is by another user named Lorem, titled 'Flipkart Software Developer Interview Experience', with a thumbnail of a man wearing sunglasses. The third post is by a user named Triman Web, titled 'Full stack developer Interview experience', with a thumbnail of a man wearing sunglasses. To the right, there's a 'Get pro version' button, a search bar, and a 'What We're Reading Today' section. This section lists several posts by users like Lorem, all related to publishing and graphic design. At the bottom right, there's a 'Recommended Topic' section with tags: Development, Backend, Lorem ipsum, Lorem, ipsum, Fullstack, and Lorem.
